

**Amendments to the Claims:**

(1) Please cancel claims 1-4 without prejudice or disclaimer of the subject matter thereof.

(2) Please add new claims 5-7.

**Listing of Claims:**

Claims 1-4 (Canceled).

Claim 5 (New): A reclosable cap for closing the mouth of a bottle neck which is provided with two radially extending rounded projections on opposite sides, said cap comprising:

a closing portion with an elastic gasket for sealing the mouth of the bottle neck;  
at least two members extending in said closed position of said cap from said closing portion parallel to opposite sides of said bottle neck; and  
at least two inverted L-shaped channels provided in said members and adapted to cooperate with said projections on said bottle neck in such a way as to keep said closing portion of said cap in place against said mouth of said bottle neck, until a force in a direction substantially perpendicular to said neck of said bottle is exerted on a pulling element located opposite said closing portion at the ends of said at least two members so as to allow for a tilting movement of said at least two members when guided by said projections along a first leg of said inverted L-shaped channel and subsequently allow for a further displacement of said at least two members and said cap when guided by said projections along a second leg of said inverted L-shaped channel, whereby said closing portion of said cap moves away from said mouth of said bottle neck.

Claim 6 (New): The reclosable cap according to claim 5, characterized in that in a lower end of said at least two members of said cap symmetrically at the two sides are formed swelled profiles.

Claim 7 (New): The reclosable cap according to claim 5, characterized in that said at least two members of said closing portion are connected by a portion forming said pulling element.
